

IN THE SPECIFICATION:

Please substitute the following paragraph for the paragraph at page 12, lines 11-22.

According to the present embodiment, on the other hand, the first planarization film 28 is completely covered with an inorganic film having high moisture resistance such as SiNx or the like, so that the space in which the organic EL element is provided is basically enclosed by the second moisture blocking film 60, the sealing member 52, and the sealing glass 50, thereby effectively preventing moisture from reaching the organic EL element. Further, because the second planarization film 32 terminates at a point which is further inside the panel with respect to the panel region where the sealing member 52 is bonded, it is ~~is it~~ also possible to reliably prevent moisture from entering the panel via the second planarization film 32.
